

Contact ASRS with your structural problems

ASRS solve age old problem of sinking bay window.

After numerous tests by their insurance company, the owners discovered their structural problems had been caused by faulty drains.

ASRS provided a guaranteed repair solution. The drains were repaired, then Helifix masonry beams were installed laterally, internally and externally around

the bay. This reconnected the bay back to the main structure, offering substantial resistance to further movement.

The work took just 1 day to complete and eradicated the need for underpinning at significantly less cost and inconvenience to the client. The work was also guaranteed for 10 years.

The 'Total Approach' from ASRS

At ASRS our complete range of solutions are tailored to suit your exacting requirements, offering the most comprehensive service on the market today.

CONSULTATION AND ASSESSMENT

Contact ASRS with your structural problems. We offer free site visits to assess the problem and propose the appropriate repair programme, tailored to suit the specific needs of the project.

DESIGN AND REPAIR PROGRAMMES

With the facility for in-house design, ASRS will design and submit calculations for the specified repair programme. Our associate Structural Engineers are on hand to assist and advise.

IMPLEMENTATION

Our skilled installation teams are highly trained and experienced in all aspects of installation, even the most challenging projects. We aim to deliver cost effective, non-disruptive and concealed solutions to all aspects of remedial masonry stabilisation.
