

HELIFIX[®]

Stress Free Structural Solutions

Structural Problems?

Together we can solve them!

For many years structural repair specialist, Helifix Ltd, has worked closely with one of its principal Approved Installers in the South West, ASRS Ltd. Together they continue to provide the best in non-disruptive concealed masonry repairs for all forms of structures from houses and tower blocks to churches and bridges – all supported by insurance-backed guarantees provided under the Helifix Professional Indemnity Insurance.

Fully proven hidden repair techniques using Helifix high quality stainless steel ties, fixings and reinforcements with professional installation undertaken by fully trained ASRS operatives.

ASRS undertake structural surveys and, in conjunction with Helifix engineers, provide designed structural repair programmes. They also carry out other construction services such as re-pointing, brick and mortar tinting and ground anchoring, full details of which can be found at www.asrs.co.uk

Jointly Helifix and ASRS have successfully completed a wide range of different projects of which the following are just a few examples:

Private House, Hampshire

The owners had been told that the whole front of their house would have to be dismantled and rebuilt after subsidence had caused major faults including bay separation, lintel failure, bowing of the front elevation and vertical cracking.

Fortunately ASRS avoided this expensive, disruptive and unnecessary course of action by using a combination of Helifix products that rapidly restored structural integrity using the existing masonry – and even retained the ivy.

Retaining Wall, Bristol

Due to the pressure of the high level ground behind it, a large stone retaining wall, over 100m long and 2.7m high, was bowing and cracking. Together with ground anchors used for lateral restraint, ASRS installed the Helibeam System of mortar bed reinforcement which stitched the cracks and formed masonry beams that redistributed the structural loads leaving this 120 year old wall fully secure.

Former Railway Bridge, Bristol

Age and weathering had severely affected this Victorian three span masonry arch bridge. There was extensive and progressive delamination of the arch rings, sections of the brickwork arches had collapsed and the spandrel and parapet walls were unstable. Together Helifix and ASRS devised repairs that reinstated the bridge to its original appearance while restoring its structural integrity, all cost-effectively completed within the six week contract timescale.
